

Block Ice Machine

Block Ice Machine

Focusun™ Block Ice Machine is manufactured with the latest technology, which is quite different from the traditional block ice machine. The traditional model is quite complicated and needs technicians from the factory to install all units on the spot, which is not only expensive in cost but electricity-consumed as well.

Focusun evaporator is made of freezing aluminum alloy. Refrigerant is evaporated in the middle of the aluminum plate. Water can be frozen into ice within a very short time. This Block Ice Machine has modular shape with features of plug and play ready system with tropical condition & coastal climate adjustment test, so it's easy to install and energy efficient.

Salient Features:

- Capacities offered: 1,000Kgs/24H to 40,000Kgs/24H
- Ice weight: 5kgs, 10kgs, 20kgs, 25kgs, 50kgs alternative
- Simple design/engineering
- No requirements of skilled workers
- High durability, minimum maintenance
- High energy efficiency
- Complete spare parts provided

Please mail us your order with the capacity, the size & weight of ice block, the temperature of the water in your area, our professional engineers will get in touch with you in 2 working days.
